About Me

MCA candidate with strong CS fundamentals and hands-on experience building distributed, multi-tier systems. Delivered production AI systems with LangGraph and FastAPI, engineered REST APIs in agile environments, and independently shipped 2 full-stack products from design to deployment. Seeking to apply systems-level thinking at Amazon scale.

Education

Nirma University

Master's of Computer Application (MCA) - *Ongoing*

2025 – 2027

CGPA: 8.48

CHARUSAT University

Bachelor's of Computer Application (BCA)

2022 – 2025

CGPA: 9.54

Experience

Wexai Multiwebx AI Innovations

Agentic AI Project Intern

May 2026 – Present

Ahmedabad

- Building multi-step Agentic AI workflows with conditional routing, chainful RAG, reflection loops, and tool-calling pipelines using LangGraph.
- Engineering low-latency bi-directional communication infrastructure using WebSockets and WebRTC — building persistent streaming layers handling real-time data across distributed service boundaries for voice-enabled AI systems.

Brainybeam Info-Tech Pvt. Ltd.

Python Django Intern

May 2024 – June 2024

Ahmedabad

- Developed and deployed server-side web applications using Python and Django, contributing to live production modules within an agile engineering environment.
- Implemented backend logic, database models, and REST API endpoints while gaining exposure to the complete software development lifecycle.

Projects

PersonalOS — All-in-One Productivity Toolkit

Nov 2024 – Apr 2025

Offline-first productivity mobile application integrating task management, habit tracking, finance reporting, notes, and AI-powered workflow automation into a unified Flutter ecosystem.

- Built the complete application independently — from UI/UX design to backend architecture — to replace fragmented productivity tools with a unified personal workflow system.
- Tech Stack: Flutter, Node.js, LangChain, LangGraph, RAG, MongoDB, SQLite, FastAPI, REST APIs
- Consolidated 5+ productivity workflows into a single mobile platform with MongoDB synchronization and integrated a RAG-powered AI assistant capable of generating tasks and habits from natural language.
- Built CI/CD deployment workflows reducing manual deployment effort by approximately 75%. **See repo →**

AI-powered full-stack web platform enabling users to query datasets and relational databases using natural language and receive visual analytics outputs.

- Designed and built a full-stack NL-to-SQL engine achieving 75% query accuracy across multi-table relational schemas—engineered query parsing, intent classification, and auto-generated visual analytics on a distributed FastAPI + PostgreSQL backend.
- Tech Stack: Python, FastAPI, LangChain, LangGraph, PostgreSQL, SQLite, Pandas, React, REST APIs
- See repo →

Technical Skills

Languages: Python, Java, JavaScript, Dart, SQL

AI / ML: LangChain, LangGraph, RAG, Prompt Engineering, Vector Embeddings

Frameworks: Flutter, React, Node.js, Express.js, FastAPI, Pandas

Databases: PostgreSQL, MongoDB, SQLite, Redis, Firebase

Coursework: Data Structures, Algorithms, OOP, System Design

Developer Tools: Git, GitHub, Docker, Postman, Linux CLI, Jira, Heroku

Achievements

Merit Scholarship & Academic Excellence Awarded full merit scholarship for the complete BCA program while consistently maintaining a 9+ CGPA across semesters. 2022 – 2025
